

First PoA miner
for Telegram community

Who earns the most in the cryptocurrency market

Cryptocurrencies are a highly profitable market with a capitalization of \$2.5 trillion. Bitcoin and Ethereum have been the dominant assets for a long time. Together, these 2 coins account for more than 2/3 of the total market capitalization:

Bitcoin concentrates more than half (51.7%) of the entire market's capitalization

Ethereum concentrates the second largest part (16.3%) of the entire market capitalization

In fact, the key holders of ETH and BTC are the wealthiest representatives of the crypto industry. They are the ones who make money on all price movements of the market.

Who controls most of the cryptocurrency market

The basis for the issuance of any coin is the mining algorithm. This is the principle of mining and controlling the network of the coin. As noted earlier, 2/3 of the market capitals are concentrated in 2 coins - BTC and ETH. They use the following algorithms:

The Proof-of-Work (PoW) algorithm is literally "proof-of-work". The more capacity, the more control and profit from the coins mined.

The Proof-of-Stake (PoS) algorithm is literally "proof of ownership". The more capital, the more control and profit from the coins mined.

In fact, most of the coins mined and their control are concentrated in the hands of owners of capital and facilities. That is, in the hands of a minority.

Who is the foundation of cryptocurrency's success and value

As noted earlier, the greatest benefit in mining the most popular coins is received by the owners of large capacities and capital. At the same time, the value of these assets directly depends on their popularity. And the key factor of popularity is the size of the community:

Community - 50 million wallets with some sort of coin movement. Hence, first place in terms of demand and asset value.

Community - 1 million wallets with some coin movement. Hence - second place in terms of demand and asset value.

Thus, **it is the community that creates the main value and popularity of the asset.** At the same time, 99.9% of the community gets the least amount of mining volume and profit from the asset. This is unfair.

Proof-of-Action (PoA) mining algorithm

Proof-of-Action (PoA) is literally "proof-of-action". This is a new, fair cryptocurrency mining algorithm where coins are mined through the active actions of the entire community.

IT company BITTON -
Telegram-Apps developer
and blockchain solutions

A large, glowing blue globe with white clouds, serving as a background for the central text.

Proof-of-Action (PoA)
algorithm - simple mining
and fair distribution of digital
assets

The Telegram community is.
about 900 million people
all over the world.

The Proof-of-Action (PoA) algorithm is a development of the technology company BITTON.
This solution was created specifically for the global Telegram community.

BTN token and BITTON application

The first asset mined using PoA technology is the BTN token. Its mining takes place within the BITTON application, which is launched in Telegram chat mode. No additional registrations, settings and special knowledge are needed here. Just 3 simple steps:

Step 1.
Launch
Telegram-App
BITTON

Step 2.
Follow the
simple steps

Step 3.
Receive the mined
BTN tokens

**The BTN token is your first token, mined and received for the fact of your actions.
Fast, simple and fair!**

BTN Tokenomics: 60% of issuance to Telegram community

The BTN token is the first token that is only controlled by the community you are already a part of.
3 points to understand your options:

- Mining a token - only with the help of the community (that is - you).
- Distributing the largest portion - 60% of the issue - to the community (i.e. you)
- Control and choice of token development path - by the community itself (i.e. you)

BTN is the first time you can mine and own an asset and influence its development more than third-party capital.

NFT collection for mining activation

To avoid bots, all users are identified using NFTs. NFTs are unique digital assets that prove your eligibility to mine BTN. Each of the 8 NFTs has several key parameters that affect your profits.

1		Free	\$0	2		Start	\$26	3		Light	\$51	4		Standard	\$108
5		Medium	\$498	6		Premium	\$999	7		Pro	\$2 000	8		Enterprise	\$5 000

In the following, we look at each of the NFT parameters in detail

Key features of each NFT

To choose the best NFT, you need to know 5 key characteristics:

1 **STANDARD**

2 **Price: \$108**

3 **ACTIONS per day: 3000**

4 **ENERGY for ACTION: 15**

5 **SATOSHI per day: 55,4**

1 **Rarity Type.** The rarer the NFT, the fewer they are released and the higher their value on the market.

2 **Cost.** The higher the cost of NFT, the better its basic characteristics - more efficient mining.

3 **ACTIONS per day.** Mining is based on your ACTIONS. The more actions you take, the more ENERGY (energy) you can generate in a day.

4 **ENERGY per ACTION.** The higher the value of your NFT, the more energy you can get for 1 ACTION. It is the ENERGY accumulated during the day that participates in the distribution of the mined BTN tokens.

5 **SATOSHI per day.** Every user can receive a daily gift - AirDrop from BITTON. This is several SATOSHI - minimum fractions of the well-known Bitcoin.

How the distribution of the mined BTNs takes place

36,000 BTN tokens are mined daily. This amount is proportionally distributed among all users who generate ENERGY. The more ENERGY you produce, the larger your share in the pool, and the more BTN tokens are credited to your balance.

Privileges for NFT BITTON owners

Owning an NFT not only provides you with access to BTN mining, but also unlocks a number of additional ecosystem opportunities. The higher the value of your NFT, the greater the scope of potential benefits:

Getting Airdrop.
Additional rewards in the form of digital assets.

Allocation Expansion.
The higher the NFT denomination, the greater the allocation in accessing new assets.

Bonuses for social engagement.
Rewards for various quests, subscriptions and shering.

Privileges in partnerships.
Promo accruals of digital assets, retrodrops and other bonuses.

The first unconditional AirDrop from the BITTON team - giving away BTC to all active NFT holders

Where the BTN token will be used

BTN is a utility token that will be applicable across the broader BITTON ecosystem. Here are a few areas we are already working on:

BTN Marketplace.

Sell your own products or buy products of other users for BTN.

BTN Profi.

Offer your competencies or get the services of other professionals for BTN.

BTN Ad.

Promote your business and monetize your account on the advertising platform for BTN.

BTN AI.

Produce any content and delegate tasks to our AI for BTN.

In total, there are more than 25 destinations planned where your mined BTN tokens will be needed

How the BITTON ecosystem will evolve

Key points of our development in the horizon of the first 2 years:

2023

Hong Kong Web3 Festival 2023. The idea of creating a new mining solution based on the Telegram community.

Q1 2024

Testing the Proof-of-Action algorithm, a special solution for Telegram Apps.

Q2 2024

Alpha version of BITTON launches. NFT-collection. Mining of the first BTN tokens.

Q4 2024

BTN listing on the key DEX. Launch of own NFT-marketplace.

Q4 2024

BTN token implementation on the Ton blockchain. DeFi interface in BITTON App.

Q3 2024

Opening of BITTON's public office in Dubai.

Q2 2024

The first AirDrop from the BITTON team. Distribution of BTC from the marketing pool.

Q4 2024

BTN listing on the key CEX. Launching your own lunchpad.

Q2 2025

Development of a mobile app and wallet for storage, exchange and payments in BTN.

Q3 2025

Business Solutions. Development of corporate payment gateways and processors for accepting payments in BTN.

Q4 2025

Launching a venture capital fund to finance BTN-enabled projects.

What is the financial potential of the BTN token

We already know that community is the basis of popularity for the financial success of any digital asset. Statistically, the more active users, the higher the price of the coin.

ETH
1 million active wallets
ATH: \$4,891

BTC
50 million active wallets
ATH: \$73,750

BTN
900 million active
Telegram users
ATH:

**Telegram's active audience is 18 times larger than all active Bitcoin wallets.
This advantage is the potential for growth and development of the BTN token.**

How to start mining BTN today

The process to start getting a BTN only takes a few minutes:

1. Take the link to the BITTON bot from the person who recommended this miner to you.

2. Refill the balance and select the desired NFT. The more expensive the NFT, the more effective it is.

3. Start doing simple activities and start generating ENERGY.

4. Receive BTN tokens based on the results of the daily distribution.

Start mining BTN tokens now!
